

Feedback:

Yves Fassin Professor, Vlerick Business School, Belgium
“very impressive work”

Zuzana Melikova PhD, Better Future, Slovakia
“WOW”

Grazyna Lebkowska Professor University of Warsaw, Professor University of Minnesota
“Thank you very much for your manuscript. I think it contains a lot of material very well digested and worth transferring to others. I wish you to publish the version as soon as you decide it’s ready.”

Georges Enderle Professor of International Business Ethics, University of Notre Dame
“I think your focus on organizational ethics is very important (particularly in Europe where this focus is gaining recognition only slowly). To define ethics only as individual ethics is a capital mistake (not supported by key moral philosophers like Aristotle, Kant and Mill). Moreover, I think ethics (and thus business ethics) also includes systemic ethics (of the economic system, capitalism, etc.)”

Beverly Kracher Professor in Business Ethics & Society, Director, Business Ethics Alliance
“...well-written, current, with appropriate use of moral theory.”

Anne Kristine Haugestad PhD-student
“A gold mine”

Tomasz Ochowski PhD, Dozent University of Warsaw
“Thank you so much for your manuscript which is really very interesting and very useful for [this] crisis time especially. It provides a good background for building intellectual bridges not only between experts in ethics, CRS and governance (these fields are, so often, treated separately by professional groups) but also – more generally – between academics and managers.”

Thomas Laudal Assistant Professor, University of Stavanger
“Ethical problems and discussions have gone on as long as humans have been able to verbalise opinions. Chapters 1–4 cover well the basic element you would expect in this context. Chapter 1 is a broad and good start.

The practices that we need to know and learn from are presented in chapters 5-6, with the most important international agreements in chapter 7. There are some good cases in chapter 8 before a more normative and well timed discussion in chapter 9. This chapter also introduces governance, and differentiates between four types: corporate, financial, ecological and business. This is meaningful to me and I agree on all main points.”

Author **Tore Audun Høie** has been a consultant for more than 50 organisations and has published 5 books + articles in some books. One book got a national award. Participated in ISO 26000 (Social Responsibility), said by ISO to be the “most important standard ever” (they have published 13000). Various teaching, including Cyberethics (master level) at HiOA and UiO. External examiner for 10 years, various topics. Investor in Algeta, an upstart creating a pioneering cancer cure (bought by Bayer 2014).

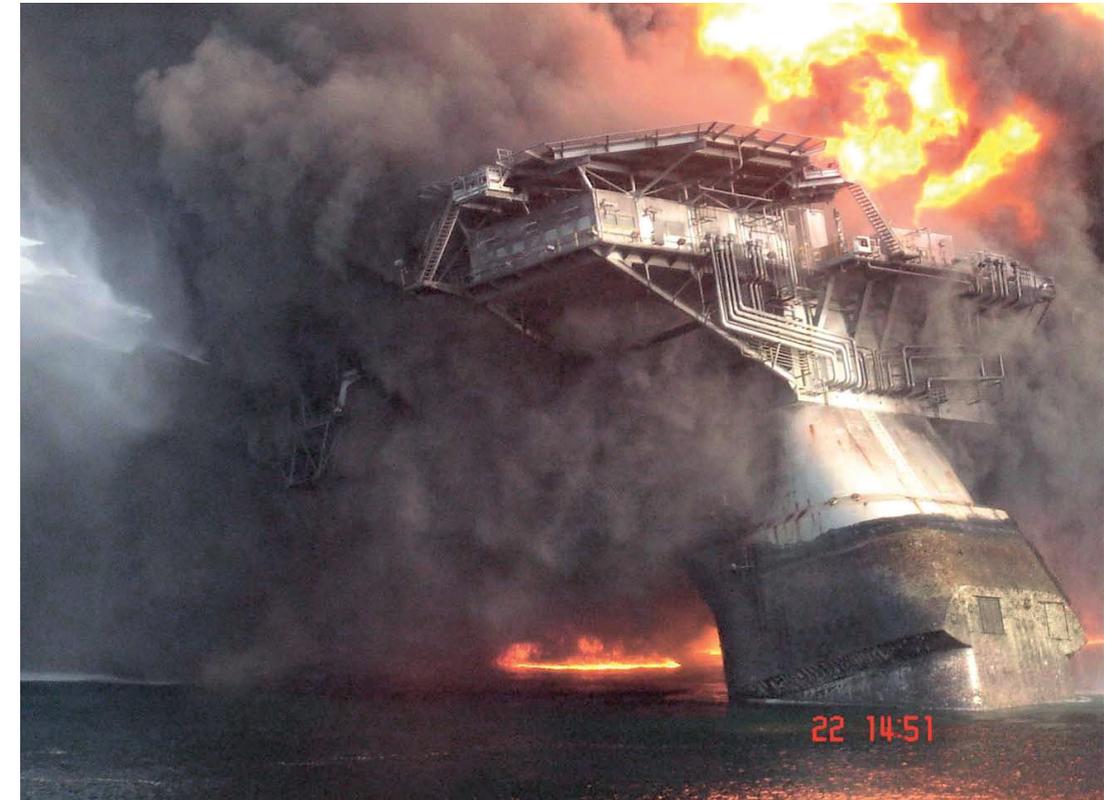

Formal background Civil Engineering (Scotland), PhD Computer Science (Denmark), postgraduate Diploma of Management (Scotland).

Interests squash, sudoku, computer gaming, gardening, reading, travelling, science fiction, nature and much more.
